

This step involves defining the key performance indicators (KPIs) for your project. These should be clear, measurable outcomes that align with your business objectives. KPIs will provide a quantifiable

What is the baseline performance? Define a baseline performance level, based on the current system or a considered good baseline. A baseline provides a point of comparison to gauge the AI system's performance and improvements.

A complete solution architecture that details how the AI system fits into and enhances the current workflow. The solution architecture will serve as a blueprint for system implementation and integration.
